INSPECTRA[®] MAX

Enhanced INSPECTRA[®] Technology for Superior Methane Detection Performances

- Latest addition to the INSPECTRA[®] product line
- Zone 1, IECEX and ATEX certified
- 0.5ppm methane sensitivity
- Smooth and stable readings
- Measurement range from 0ppm to 100% Vol. Gas CH₄

Latest addition to the GAZOMAT™ INSPECTRA® product line, the INSPECTRA® MAX instrument builds upon newest advances in the proven laser spectroscopy technology used by the well-known INSPECTRA® LASER. The INSPECTRA® MAX offers measurement performances of the highest accuracy and reliability, while fully complying with latest IECEx and ATEX standards for use in explosive atmospheres.

It is also in the field of interconnected mobility that the INSPECTRA® MAX stands out, with functions that make live connected leak monitoring and data integrity a reality.

Enhanced TDLAS Laser Spectroscopy Technology

With the INSPECTRA® MAX, GAZOMAT brings the TDLAS technology to the next level. The new optical unit developed:

- Increases sensitivity to methane
- Improves accuracy and speed of gas concentration analysis
- Extends the product's life with the same enhanced sensitivity and high precision performances over the years.

Continuous Scaling for Optimised Measurements and Display

- The INSPECTRA® MAX innovates with a continuous scale of gas concentration analysis and display. Direct benefits are ultra-low latency in the display and smooth measurements.
- The continuous scale also helps preserve:
 - Response time quality
 - Methane selectivity

Zone 1, IECEx and ATEX Certification

Intrinsically safe, the INSPECTRA® MAX detector can be operated in Zone 1, IECEx and ATEX explosive atmospheres, both indoors and outdoors. The instrument also complies with the latest optical radiation protection directive (see technical specifications).

Easy-to-Use with Maximum Flexibility

- Ultra-short start-up time, less than 15s
- Automatic self-test at start-up
- Visual and audio indicators (battery charge level, pump status, alarm on/off, risk of explosion, etc.)
- Access to standard and advanced functions with the 5-key keypad
- Operates with GAZOMAT battery pack in explosive atmospheres *or with LR20 alkaline dry cells in non-explosive atmospheres exclusively*
- Easy-to-replace battery pack – no return to service center required
- Modular telescopic carbon sampling probe. Connects easily to a suction cup, a single-wheel probe or a gas-trap trolley
- Connects to the GAZOSURVEY™ mobile App (optional) via a smartphone or tablet. Gas leak detection traceability is guaranteed.

Scope of Application

Suitable for any application requiring the measurement of methane or biomethane concentrations:

- Detection and precise location of gas leaks, any field configuration: bore holes, confined areas, etc.
- Survey of underground and aboveground pipelines
- Monitoring of compression plants, gas storage plants, high pressure lines, pressure reducing stations, etc.
- Surface emission monitoring of volcano sites, landfills, etc.
- Analysis in laboratories

Accessories and Add-on

- 100-240VAC 50Hz-60Hz charger
- Rechargeable battery pack (not shown) - fits inside the instrument
- Modular telescopic sampling probe with suction cup
- Storage case for the detector and its accessories
- Set of water-repellent filters and dust filters (not shown)
- Pin wrench to access the water-repellent filter compartment (not shown)
- **Optional:**
 - 12VDC charger
 - Long semi-rigid sampling probe with its filter fitted handle (not shown)
 - Short flexible probe with its handle (not shown)
 - Gas check kit comprising a gas check cylinder and a pressure regulator
 - Bluetooth communicator (not shown) for wireless data transfer

Sampling Equipment Compatible with the Instrument

Telescopic sampling probe and accessories				Other equipment	
					
Modular telescopic carbon sampling probe	Suction cup probe	Gas trap trolley (optional)	Single-wheel probe (optional)	Long probe (optional)	Short probe (optional)

GAZOSURVEY™, the Mobile App Dedicated to Methane Leak Monitoring (optional)

Available as an option, GAZOSURVEY ⁽¹⁾ is a software application running on iOS and Android smart devices. It has been developed for leak monitoring of natural gas or biogas installations and pipelines.

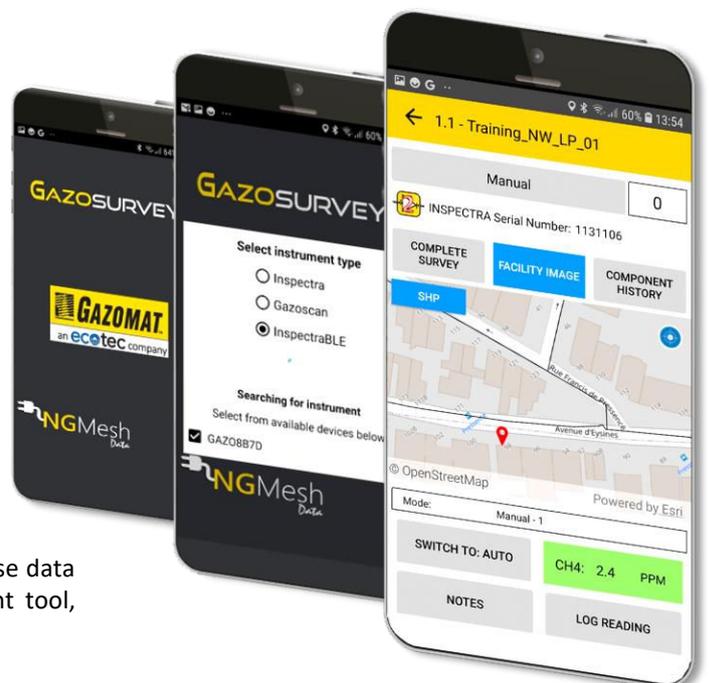

GAZOSURVEY app facilitates survey data collection and transfer. The smart device connects in Bluetooth to the INSPECTRA® MAX detector. Via the app, the field technician can then use the smart device's functions:

- Geolocation and navigation on maps
- Note entry
- Multiple photo storage using the camera

Through an interface with a web platform, georeferenced survey data is transferred, and alerts are automatically sent to emergency personnel or services.

Once deployed to all field technicians and built into an enterprise data management system, GAZOSURVEY is a powerful management tool, providing global visibility on leak activity.

(1) Application marketed separately. Consult GAZOSURVEY brochure
